CROBO Advisors LLC

Form ADV Part 2A

Disclosure Brochure

CROBO Advisors LLC

croboearn.com

June 2026

This brochure provides information about the qualifications and business practices of CROBO Advisors LLC (dba "CroboEarn"). If you have any questions about the contents of this brochure, please contact us at the contact information listed above. The information in this brochure has not been approved or verified by the United States Securities and Exchange Commission or by any state securities authority.

Additional information about CROBO Advisors LLC is also available on the SEC's website at www.adviserinfo.sec.gov.

Registration as an investment adviser does not imply a certain level of skill or training.

Item 2 – Material Changes

This is the initial brochure for CROBO Advisors LLC. As an initial filing, there are no material changes to disclose.

Item 3 – Table of Contents

Item 1 – Cover Page
Item 2 – Material Changes
Item 3 – Table of Contents
Item 4 – Advisory Business
Item 5 – Fees and Compensation
Item 6 – Performance-Based Fees and Side-by-Side Management
Item 7 – Types of Clients
Item 8 – Methods of Analysis, Investment Strategies and Risk of Loss
Item 9 – Disciplinary Information
Item 10 – Other Financial Industry Activities and Affiliations
Item 11 – Code of Ethics, Participation or Interest in Client Transactions and Personal Trading
Item 12 – Brokerage Practices

Item 4 – Advisory Business

CROBO Advisors LLC ("CROBO", "CroboEarn" or the "Firm") is a wholly owned subsidiary of Getbit Technologies Inc. CROBO Advisors LLC was formed to provide automated investment advisory services through an online robo-advisory platform operating at croboearn.com.

The principal owner of CROBO Advisors LLC is Getbit Technologies Inc. Abhay Agarwal is the majority shareholder of Getbit Technologies Inc. CROBO Advisors LLC currently operates with two primary personnel: Abhay Agarwal and Ian Ash.

The firm provides discretionary investment management services through Separately Managed Accounts ("SMAs"). Client assets are maintained in individual brokerage accounts held at Alpaca, the firm's anticipated qualified custodian and broker-dealer.

The firm specializes in automated quantitative and model-based investment strategies focused on high-yield investment portfolios consisting primarily of SEC-listed perpetual preferred securities and U.S. Treasury instruments. Advisory services are delivered algorithmically through croboearn.com pursuant to the SEC Internet Adviser Exemption framework.

The firm currently offers three model portfolios:
• Conservative Portfolio
• Active Portfolio
• Bold Portfolio

The portfolios are designed around varying levels of concentration, volatility, and income generation objectives. The firm may market its advisory services to existing users of affiliated businesses, including CROBO Money and CROBO Earn, which are operated by affiliated entities under common ownership.

Clients complete an online onboarding questionnaire that evaluates investment objectives, risk tolerance, investment experience, liquidity needs, and investment horizon. The firm utilizes this information to assign clients to a model portfolio and risk profile.

The firm exercises discretionary authority over client accounts pursuant to client advisory agreements and the Investment Policy Statement.

Item 5 – Fees and Compensation

The firm anticipates charging an asset-based advisory fee of up to 2.5% annually. Fees are expected to be charged monthly in arrears based upon assets under management.
The firm may offer fee discounts based upon account size, customer relationship tier, investment tenor, or other criteria determined by the firm as outlined as follows:

Base Advisory Fee

Base fee: 2.50% per annum on assets under management, charged monthly (calculated as one-twelfth of the annual rate applied to month-end invested amount). This is the maximum fee a customer will pay. Customers may qualify for reductions to this base rate through the two-tiered discount mechanisms described below.

Tenor Discount (Tranche-Level)

Customers who commit funds for longer periods may receive a discount applied at the tranche level. Each deposit a customer makes is treated as its own tranche with its own tenor clock. As a tranche ages, its associated fee discount steps up.

Tranche Age	Tenor Discount	Effective Base
0 – 6 months	0 bps	**2.50%**
7 – 12 months	25 bps	**2.25%**
12+ months	50 bps	**2.00%**

A customer who deposits $10,000 on day one pays the full 2.50% on that tranche for the first six months. Beginning in the seventh month of that tranche, the rate drops to 2.25%. Beginning in the thirteenth month, the rate drops to 2.00%. Each subsequent tranche the same customer adds has its own independent tenor clock and progresses through the same discount steps from its own start date.

Amount Discount (Account-Level)

Customers with larger total account values receive an additional discount applied at the aggregate account level. This discount is computed based on the customer's combined invested amount across all tranches, recalculated monthly.

Total Account Value	Amount Discount	Discount Effect
Under $25,000	0 bps	No reduction
$25,000 – $50,000	25 bps	**– 0.25%**
Over $50,000	50 bps	**– 0.50%**

Combined Fee Matrix

A customer earns the tenor discount applicable to each tranche and the amount discount applicable to their total account value. The combined matrix below shows the effective annualized rate paid for every combination of tranche age and account size. The maximum any customer pays is 2.50%; the minimum any customer can reach is 1.50%.

Tranche Age ↓ / Account Value →	Under $25K	$25K – $50K	Over $50K
0 – 6 months	2.50%	2.25%	2.00%
6 – 12 months	2.25%	2.00%	1.75%
12+ months	2.00%	1.75%	1.50%

Item 6 – Performance-Based Fees and Side-by-Side Management

The firm does not currently intend to charge traditional performance-based fees based on capital appreciation or realized investment gains.

Item 7 – Types of Clients

The firm primarily provides advisory services to corporations and individual retail investors seeking investment strategies through automated investment management services.

The firm also will market advisory services to users of affiliated businesses, including CROBO Money customers, however existing CroboEarn customers, need not utilize the services of Crobo Money.

The firm requires clients to complete an online suitability questionnaire prior to opening an

account. The onboarding process evaluates customer eligibility, risk tolerance, liquidity needs, investment objectives, and investment experience.

The firm may impose minimum account size requirements and minimum investment tenor requirements.

Item 8 – Methods of Analysis, Investment Strategies and Risk of Loss

The firm utilizes quantitative analysis, algorithmic portfolio assignment, issuer analysis, suitability scoring, and investment committee oversight in formulating investment advice and managing client assets.

The firm offers three primary model portfolios:
• Conservative Portfolio – includes allocations to U.S. Treasury securities intended to reduce volatility
• Active Portfolio – higher concentration in preferred securities
• Bold Portfolio – higher concentration in preferred securities and increased portfolio credit related to smaller issuers.

The firm does not perform routine periodic rebalancing. Portfolio adjustments generally occur only in connection with:
• Client contributions
• Client withdrawals
• Client risk-profile changes
• Stress-response protocols
• Other operational adjustments determined by the investment committee

1. Modern Portfolio Theory (MPT)

Foundation of most portfolio construction: diversification across asset classes to maximize expected return for a given level of risk, however, CroboEarn portfolios will generally be concentrated across a few issuers, limiting the diversification effects when compared to larger pools of holdings in a portfolio.

2. Behavioral Finance Principles

Recognizing and addressing cognitive biases such as loss aversion, overconfidence, herd behavior, and mental accounting. Structuring advice to help clients avoid emotional decision-making (panic selling, chasing returns, etc.).

3. Risk Management and Capacity Frameworks

Risk tolerance vs. risk capacity: distinguishing between a client's psychological comfort with volatility (tolerance) and their financial ability to withstand losses (capacity). Stress-testing portfolios against market downturns, inflation, or unexpected expenses.

4. Goals-Based Investing

Aligning portfolios not to "beat the market" but to fund specific life goals (retirement income, education funding, business liquidity, legacy giving).

Matching time horizons to appropriate asset allocations (short-term safety vs. long-term growth).

5. Liquidity Planning

Maintaining sufficient cash and short-term assets for emergencies and upcoming expenses.

Avoiding forced sales during downturns by structuring an appropriate "bucket strategy" (short-term, intermediate, long-term).

6. Fiduciary and Ethical Principles

Teh Firm is bound to act as fiduciaries: putting the client's best interest first, disclosing conflicts, and ensuring advice is prudent and suitable.

This principal guides not just investment selection, but also the decision of when *not* to invest.

B. Material Risks Involved

Methods of Analysis

Modern portfolio theory assumes that investors are risk averse, meaning that given two portfolios that offer the same expected return, investors will prefer the less risky one. Thus, an investor will take on increased risk only if compensated by higher expected returns. Conversely, an investor who wants higher expected returns must accept more risk. The exact trade-off will be the same for all investors, but different investors will evaluate the trade-off differently based on individual risk aversion characteristics. The implication is that a rational investor will not invest in a portfolio if a second portfolio exists with a more favorable risk-expected return profile – i.e., if for that level of risk an alternative portfolio exists which has better expected returns.

Investment Strategies

Long-term investment is designed to capture market rates of both return and risk. Due to its nature, the long-term investment strategy can expose clients to various types of risk that will typically surface at various intervals during the time the client owns the investments. These risks include but are not limited to inflation (purchasing power) risk, interest rate risk, economic risk, market risk, and political/regulatory risk.

Short term trading risks include liquidity, economic stability, and inflation, in addition to the long-term trading risks listed above. Frequent trading can affect investment performance, particularly through increased brokerage and other transaction costs and taxes.

Investing in securities involves a risk of loss that you, as a client, should be prepared to bear.

Risks of Specific Securities Utilized

Clients should be aware that there is a material risk of loss using any investment strategy. The investment types listed below (leaving aside Treasury Inflation Protected/Inflation Linked Bonds) are not guaranteed or insured by the FDIC or any other government agency.

Mutual Funds: Investing in mutual funds carries the risk of capital loss and thus you may lose money investing in mutual funds. All mutual funds have costs that lower investment returns. The funds can be of bond "fixed income" nature (lower risk) or stock "equity" nature.

Equity investment generally refers to buying shares of stocks in return for receiving a future payment of dividends and/or capital gains if the value of the stock increases. The value of equity

securities may fluctuate in response to specific situations for each company, industry conditions and the general economic environments.

Perpetual Preferred Equity Risk Disclosure

An investment in perpetual preferred equity may involve significant risks and may not be suitable for all investors. Perpetual preferred equity generally has no stated maturity date, which means investors may not have the opportunity to recover their principal through redemption or repayment at a specified time, dividend payments may be reduced, deferred, or suspended, depending on the issuer's financial condition and the terms of the security.

Preferred equity holders typically rank junior to creditors and may have limited rights compared to debt holders in the event of liquidation, bankruptcy, or restructuring. Rising interest rates may adversely affect the value of these securities. Perpetual Preferred Equity may not be as liquid as the issuer's other asset types and may face a more restrictive trading condition impacting implied liquidity. Implied liquidity is a measure of what can potentially be traded in the perpetual preferred equity. **Fixed income** investments generally pay a return on a fixed schedule, though the amount of the payments can vary. This type of investment can include corporate and government debt securities, leveraged loans, high yield, and investment grade debt and structured products, such as mortgage and other asset-backed securities, although individual bonds may be the best-known type of fixed income security. In general, the fixed income market is volatile and fixed income securities carry interest rate risk. (As interest rates rise, bond prices usually fall, and vice versa. This effect is usually more pronounced for longer-term securities.) Fixed income securities also carry inflation risk, liquidity risk, call risk, and credit and default risks for both issuers and counterparties. The risk of default on treasury inflation protected/inflation linked bonds is dependent upon the U.S. Treasury defaulting (extremely unlikely); Liquidity and default risk may be more pronounced for portfolio that are concentrated across fewer issuers, whereby a default, yield or dividend suspension by an issuer where will have a greater impact on a concentrated portfolio. Likewise, such risks may produce added an liquidity risk for such issuers. Risks of investing in foreign fixed income securities also include the general risk of non-U.S. investing described below.

Exchange Traded Funds (ETFs): An ETF is an investment fund traded on stock exchanges, similar to stocks. Investing in ETFs carries the risk of capital loss (sometimes up to a 100% loss in the case of a stock holding bankruptcy). Areas of concern include the lack of transparency in products and increasing complexity, conflicts of interest and the possibility of inadequate regulatory compliance. Risks in investing in ETFs include trading risks, liquidity and shutdown risks, risks associated with a change in authorized participants and non-participation of authorized participants, risks that trading price differs from indicative net asset value (iNAV), or price fluctuation and disassociation from the index being tracked. With regard to trading risks, regular trading adds cost to your portfolio thus counteracting the low fees that are one of the typical benefits of ETFs. Additionally, regular trading to beneficially "time the market" is difficult to achieve. Even paid fund managers struggle to do this every year, with the majority failing to beat the relevant indexes. With regard to liquidity and shutdown risks, not all ETFs have the same level of liquidity. Since ETFs are at least as liquid as their underlying assets, trading conditions are more accurately reflected in implied liquidity rather than the average daily volume of the ETF itself. Implied liquidity is a measure of what can potentially be traded in ETFs based on its underlying assets. ETFs are subject to market volatility and the risks of their underlying securities, which may include the risks associated with investing in smaller companies, foreign securities, commodities, and fixed income investments (as applicable). Foreign securities are subject to interest rate, currency exchange rate, economic, and political risks, all of which are magnified in emerging markets. ETFs that target a small universe of securities, such as a specific region or market sector, are generally subject to greater market

volatility, as well as to the specific risks associated with that sector, region, or other focus. ETFs that use derivatives, leverage, or complex investment strategies are subject to additional risks. Precious Metal ETFs (e.g., Gold, Silver, or Palladium Bullion backed "electronic shares" not physical metal) specifically may be negatively impacted by several unique factors, among them (1) large sales by the official sector which own a significant portion of aggregate world holdings in gold and other precious metals, (2) a significant increase in hedging activities by producers of gold or other precious metals, (3) a significant change in the attitude of speculators and investors. The return of an ETF index is usually different from that of the index it tracks because of fees, expenses, and tracking errors. An ETF may trade at a premium or discount to its net asset value (NAV) (or indicative value in the case of exchange-traded notes). The degree of liquidity can vary significantly from one ETF to another, and losses may be magnified if no liquid market exists for ETF's shares when attempting to sell them. Each ETF has a unique risk profile, detailed in its prospectus, offering circular, or similar material, which should be considered carefully when making investment decisions.

Real estate funds (including REITs) face several kinds of risks that are inherent in the real estate sector, which historically has experienced significant fluctuations and cycles in performance. Revenues and cash flows may be adversely affected by: changes in local real estate market conditions due to changes in national or local economic conditions or changes in local property market characteristics; competition from other properties offering the same or similar services; changes in interest rates and in the state of the debt and equity credit markets; the ongoing need for capital improvements; changes in real estate tax rates and other operating expenses; adverse changes in governmental rules and fiscal policies; adverse changes in zoning laws; the impact of present or future environmental legislation and compliance with environmental laws.

Annuities are a retirement product for those who may have the ability to pay a premium now and want to guarantee they receive certain monthly payments or a return on investment later in the future. Annuities are contracts issued by a life insurance company designed to meet requirements or other long-term goals. An annuity is not a life insurance policy. Variable annuities are designed to be long-term investments, to meet retirement and other long-range goals. Variable annuities are not suitable for meeting short-term goals because substantial taxes and insurance company charges may apply if you withdraw your money early. Variable annuities also involve investment risks, just as mutual funds do.

Private placements carry a substantial risk as they are subject to less regulation than are publicly offered securities, the market to resell these assets under applicable securities laws may be illiquid, due to restrictions, and the liquidation may be taken at a substantial discount to the underlying value or result in the entire loss of the value of such assets.

Venture capital funds invest in start-up companies at an early stage of development in the interest of generating a return through an eventual realization event; the risk is high as a result of the uncertainty involved at that stage of development.

Commodities are tangible assets used to manufacture and produce goods or services. Commodity prices are affected by different risk factors, such as disease, storage capacity, supply, demand, delivery constraints and weather. Because of those risk factors, even a well-diversified investment in commodities can be uncertain.

Digital Asset Risks

Clients who purchase digital assets, unlike bank deposits or securities accounts respectively, are not subject to U.S. Federal Deposit Insurance Corporation ("FDIC") or U.S. Securities Investor

Protection Corporation ("SIPC") protections. In the event of the permanent loss or theft of any digital assets, the insolvency of any of the digital asset exchanges where a Client's digital assets are held or the insolvency of any depository or custodian for such digital assets, a Client may be unable to recover all of its funds or the value of its assets so deposited. Digital assets are more volatile than traditional currencies and financial assets. The emergence of digital assets has exhibited liquidity risk; credit risk; market risk; operational risk (including fraud and cyber risks); money laundering and terrorist financing risk; and legal and reputation risks. The digital asset market at large is fast evolving and direct connections between crypto assets and systemically important financial institutions and core financial markets, while growing rapidly, are limited at the present time. As such, a client will be directly and indirectly exposed to risks relating to the further development and acceptance of digital assets, which are part of a new and rapidly changing industry. Digital assets are subject to a variety of factors that are difficult to evaluate both in their day-to-day operations and services offered, but also in their relation to the digital asset landscape as a whole. The slowing or stopping of the development or acceptance of such currencies may adversely affect all or certain digital assets as well as the value of a client's account. The potential use of digital assets to, among other things, buy and sell goods and services, to transfer value, and to represent ownership and control is part of a new and rapidly evolving industry that employs digital assets based upon a computer-generated mathematical and/or cryptographic protocol. The growth of the digital asset industry is subject to a high degree of uncertainty. The factors affecting the further development of this industry may include, but are not limited to:

- continued worldwide growth in the adoption and use of digital assets
- government and other regulations of digital assets and their use, services relating to, or restrictions on the operation of digital assets networks, systems, and protocols
- the use of the networks supporting digital assets for developing smart contracts and distributed applications
- general economic conditions and the regulatory environment relating to digital assets
- improved anti-fraud, anti-money laundering, and suspicious activity controls, reporting and methodologies applicable to digital asset
- negative consumer or public perception of digital assets

Risk of Total Loss of Capital

The use of certain trading counterparties and exchanges, in the context of digital asset transactions, may substantially increase transactional risks and increase the adverse impact to which a client may be subject.

Risk Related to Regulatory Change Oversight

U.S. federal, state, and regulatory agencies, such as the SEC have been examining digital asset networks, digital asset companies and exchange markets. Currently, the regulatory framework does not present a uniform or unifying set of legal theories or applicable legal regimes to which digital assets are regulated or for which digital assets can be defined, as a result and as new legislation and regulations are enacted, regulatory changes and unforeseen regulatory implications have the potential to negatively impact the value of a Client's digital assets and the use and interest in such digital assets. Ongoing and future legislative and regulatory actions may impact and perhaps to a material adverse extent, the nature of a client's investment or the ability of the digital asset technology to continue to operate. Many state and federal agencies have issued consumer advisories regarding the risks posed by bitcoin and other digital assets to investors. In addition, U.S. federal and state agencies, and regulatory bodies in the U.S. and in other countries have issued guidance about the treatment of digital asset transactions or requirements for businesses engaged in digital asset activity. Various digital assets may not be

excluded from the definition of a commodity" or "security" by such future CFTC and SEC rulemaking, respectively. Currently, the Firm is not aware of any rules that have been proposed to further regulate digital assets as a commodity or security, but this is subject to change. The firm cannot be certain as to how future regulatory developments will impact the treatment of digital assets under the law. The CFTC has declared that some digital assets are commodities, and digital assets transactions that are entered into, or offered, to retail customers, may be subject to CFTC jurisdiction under certain circumstances. However, the SEC has stated that certain transactions in digital assets may be securities transactions, depending on the specific facts and circumstances of the digital assets and transactions in question. The Firm may be required to register and comply with additional regulatory agencies and other regulations. In such an event, the firm could cause a client not to hold any affected assets and cause the Client to incur losses and lost opportunities. Regulatory changes or interpretations relating to the custody of digital assets could require certain vendors to be required to apply for licenses that they do not already have and could subject these parties to investigations and penalties. Such additional registrations and compliance, or any enforcement action, may result in extraordinary, non-recurring expenses.

On February 15, 2023, the SEC proposed amendments to the Custody Rule (Safeguarding Advisory Client Assets, Investment Advisers Act Rel. No. 6240) ("Proposed Rule" or the "Rule"). The Proposed Rule would govern all client assets, which would include digital assets and would affect the ability of financial institutions to serve as qualified custodians for digital assets. The Proposed Rule, like the current Custody Rule, looks to the definition of "bank" under the Advisers Act, which includes state-chartered trust companies. Although the Proposed Rule does not modify the ability of state-chartered trust companies to serve as qualified custodians, the SEC raised various questions regarding the quality of regulatory protections and oversight imposed on such companies. The Proposed Rule also clarifies what it means for an adviser to "maintain" assets with a qualified custodian. While the Proposed Rule would entrust safekeeping of client assets to a qualified custodian, it would depart from the existing Custody Rule in that a qualified custodian would not be deemed to 'maintain' a client asset for purposes of the rule if it does not have 'possession or control' of that asset. If the Proposed Rule is adopted, partially or in full, and if the SEC determines that the custodians used by the firm and its clients for custody and exchange services do not comply with the Rule with respect to their custody of digital assets, clients may be required to move their assets to a custodian, should any exist, that would be deemed "qualified" or terminate the account and liquidate a Client's investments. Agreements prepared in connection with the client cannot address or anticipate every possible current or future regulation that may affect a client, firm vendors or counterparties. Such regulations may have a significant impact to clients, including, without limitation, by restricting the types of investments a client may make. Changes or actions may alter the nature of a client's investment or restrict the use of digital assets or the operation of digital asset networks in a manner that adversely affects a client's investment.

Risks Associated with Digital Asset Exchanges and Trading

The digital asset trading platforms and venues ("exchanges") on which digital assets trade are relatively new and, in many cases, are either lightly regulated, unregulated or are facing significant regulatory scrutiny including enforcement actions and therefore may be more exposed to fraud and failure than established, regulated exchanges for other assets. Any fraud, security failure or operational problems experienced by the digital asset exchanges could result in a reduction in the value of the digital assets and adversely affect an investment in the interests of the clients. Furthermore, many such exchanges do not provide the public with significant information regarding their ownership structure, management teams, corporate practices, or regulatory compliance. As a result, the marketplace may lose confidence in, or may experience problems relating to, digital asset exchanges, including prominent exchanges

handling a significant portion of the volume of trading. Digital asset exchanges may impose customer-specific transaction or distribution limits or suspend withdrawals entirely, rendering the exchange of digital assets for fiat currency difficult or impossible. To the extent that a digital asset is hosted or traded on a limited number of exchanges, these risks are amplified and may cause a significant diminution in value of such digital asset.

Digital assets traded on a blockchain may not rely on a trusted intermediary or depository institution. Participation in exchanges often requires a user to take on risk by transferring digital assets from such user's account to a third party's account which may or may not be hosted directly at or by the exchange. Clients should review the terms of their custodial user agreements carefully and ensure that assets are maintained in a way that ensures protection of the assets. Digital asset exchanges that are regulated typically must comply with minimum net worth, cybersecurity, insurance, audit, and anti-money laundering requirements, but are not typically required to protect customers or their markets to the same extent that regulated securities exchanges or futures exchanges are required to do so. For example, U.S. state and federal regulatory regimes for digital asset exchanges have different requirements than traditional equity exchanges and their reporting requirements are less known and available than traditional exchanges. The firm has limited insight as to the processes used by digital asset exchanges to detect, report, or prevent manipulative trading activity. In addition, many digital asset exchanges may in fact lack certain safeguards put in place by more traditional exchanges to enhance the stability of trading. As a result, the prices of digital assets on digital asset exchanges may be subject to larger and/or more frequent sudden declines than assets traded on more traditional exchanges. A lack of stability in digital asset exchanges, manipulation of digital asset markets by digital asset exchange customers and the closure or temporary shutdown of such exchanges due to fraud, business failure, hackers or malware, or government mandated regulation may reduce confidence in the digital assets generally and result in greater volatility in the digital asset market. These potential consequences of an exchange's failure or failure to prevent market manipulation could adversely affect a client's investment.

Pricing and Volatility of Digital Asset Values

Extreme volatility in the future, including further declines in the trading prices of digital assets, could have a material adverse effect on the value of a client's investment, including a loss of all or substantially all of a client's investment. Supply of any digital asset is generally determined by a computer code or network administration, not by a central bank, and prices can be extremely volatile relative to more traditional markets. Several factors may affect the price of digital assets or the value of digital assets, including, but not limited to: supply and demand, public and non-public information, investors' expectations, the rate of inflation, interest rates, currency exchange rates or future legislative or regulatory measures that restrict the trading of digital assets and the use of digital assets as a form of payment. Exchanges for digital asset investing are dependent upon the internet and any significant disruption in internet connectivity could disrupt network operations and have an adverse effect on the trading, pricing, and access of digital assets.

Non-U.S. securities present certain risks such as currency fluctuation, political and economic change, social unrest, changes in government regulation, differences in accounting and the lesser degree of accurate public information available.

Fundamental analysis involves analyzing individual companies and their industry groups, such as a company's financial statements, details regarding the company's product line, the experience, and expertise of the company's management, and the outlook for the company's industry. The resulting data is used to measure the true value of the company's stock compared to the current market value. The risk of fundamental analysis is that the information obtained

may be incorrect and the analysis may not provide an accurate estimate of earnings, which may be the basis for a stock's value. If securities prices adjust rapidly to new information, utilizing fundamental analysis may not result in favorable performance.

Technical analysis involves using chart patterns, momentum, volume, and relative strength to pick sectors that may outperform market indices. However, there is no assurance of accurate forecasts or that trends will develop in the markets we follow. In the past, there have been periods without discernible trends and similar periods will presumably occur in the future. Even where major trends develop, outside factors like government intervention could potentially shorten them.

Furthermore, one limitation of technical analysis is that it requires price movement data which can translate into price trends sufficient to dictate a market entry or exit decision. In a trendless or erratic market, a technical method may fail to identify trends requiring action. In addition, technical methods may overreact to minor price movements, establishing positions contrary to overall price trends, which may result in losses. Finally, a technical trading method may underperform other trading methods when fundamental factors dominate price moves within a given market.

Cyclical analysis is a type of technical analysis that involves evaluating recurring price patterns and trends based upon business cycles. Economic/business cycles may not be predictable and may have many fluctuations between long-term expansions and contractions. The lengths of economic cycles may be difficult to predict with accuracy and therefore the risk of cyclical analysis is the difficulty in predicting economic trends and consequently the changing value of securities that would be affected by these changing trends.

Passive Investment Management involves passing investing to build portfolios that are comprised of various distinct asset classes. The asset classes are weighted in a manner to achieve the desired relationship between correlation, risk and return. Funds that passively capture the returns of the desired asset classes are placed in the portfolio. The funds that are used to build passive portfolios are typically index mutual funds or 10 exchange-traded funds.

Passive investment management is characterized by low portfolio expenses (i.e. the funds inside the portfolio have low internal costs), minimal trading costs (due to infrequent trading activity), and relative tax efficiency (because the funds inside the portfolio are tax efficient and turnover inside the portfolio is minimal).

In contrast, active management involves a single manager or managers who employ some method, strategy or technique to construct a portfolio that is intended to generate returns that are greater than the broader market or a designated benchmark.

C. Additional Material Risks Involved

All investment strategies we offer involve risk and may result in a loss of clients' original investment which clients should be prepared to bear. Many of these risks apply equally to stocks, bonds, commodities, and any other investment or security. Material risks associated with our investment strategies are listed below.

Market Risk: Market risk involves the possibility that an investment's current market value will fall because of a general market decline, reducing the value of the investment regardless of the operational success of the issuer's operations or its financial condition.

Strategy Risk: The firm's investment strategies and/or investment techniques may not work as intended.

Small and Medium Cap Company Risk: Securities of companies with small and medium market capitalizations are often more volatile and less liquid than investments in larger companies. Small and medium-cap companies may face a greater risk of business failure, which could increase the volatility of the client's portfolio.

Turnover Risk: At times, the strategy may have a portfolio turnover rate that is higher than other strategies. A high portfolio turnover would result in correspondingly greater brokerage commission expenses and may result in the distribution of additional capital gains for tax purposes. These factors may negatively affect the accounts' performance.

Limited markets: Certain securities may be less liquid (harder to sell or buy) and their prices may at times be more volatile than at other times. Under certain market conditions, we may be unable to sell or liquidate investments at prices we consider reasonable or favorable or find buyers at any price.

Concentration Risk: Certain investment strategies focus on particular asset-classes, industries, sectors or types of investment. From time to time these strategies may be subject to greater risks of adverse developments in such areas of focus than a strategy that is more broadly diversified across a wider variety of investments.

Interest Rate Risk: Fixed income prices generally fall when interest rates rise, and the value may fall below par value or the principal investment. The opposite is also generally true: bond prices generally rise when interest rates fall. In general, fixed income securities with longer maturities are more sensitive to these price changes. Most other investments are also sensitive to the level and direction of interest rates.

Legal or Legislative Risk: Legislative changes or court rulings may impact the value of investments or the security owner's claim on the issuer's assets and finances.

Inflation: Inflation may erode the buying power of clients' investment portfolios, even if the nominal dollar value of the investments remains the same.

D. Risks Associated with Securities

Apart from the general risks outlined above which apply to all types of investments, specific securities may have other risks.

Commercial Paper is, in most cases, an unsecured promissory note that is issued with a maturity of 270 days or less. Being unsecured, the risk to the investor is that the issuer may default.

Common stocks may go up and down in price quite dramatically and in the event of an issuer's bankruptcy or restructuring could lose all value. A slower growth or recessionary economic environment could have an adverse effect on the price of all stocks.

Corporate Bonds are debt securities to borrow money. Generally, issuers pay investors periodic interest and repay the amount borrowed either periodically during the life of the security and/or at maturity. Alternatively, investors can purchase other debt securities, such as zero-coupon bonds which do not pay current interest but rather are priced at a discount from their face values and their values accrete over time to face value at maturity. The market prices of debt securities fluctuate depending on factors such as interest rates, credit quality and maturity. In general, market prices of debt securities decline when interest rates rise and increase when interest rates fall. The longer the time to a bond's maturity, the greater its interest rate risk.

Bank Obligations including bonds and certificates of deposit may be vulnerable to setbacks or panics in the banking industry. Banks and other financial institutions are greatly affected by interest rates and may be adversely affected by downturns in the U.S. and foreign economies or changes in banking regulations.

Municipal Bonds are debt obligations generally issued to obtain funds for various public purposes including the construction of public facilities. Municipal bonds pay a lower rate of return than most other types of bonds. However, because of a municipal bond's tax-favored status, investors should compare the relative after-tax return to the after-tax return of other bonds, depending on the investor's tax bracket. Investing in municipal bonds carries the same general risks as investing in bonds in general. Those risks include interest rate risk, reinvestment risk, inflation risk, market risk, call or redemption risk, credit risk, and liquidity and valuation risk.

Options and Other Derivatives carry many unique risks, including time-sensitivity, and can result in the complete loss of principal. While covered call writing does provide a partial hedge to the stock against which the call is written, the hedge is limited to the amount of cash flow received when writing the option. When selling covered calls, there is a risk the underlying position may be called away at a price lower than the current market price.

Exchange Traded Fund ("ETF") prices may vary significantly from their net asset values due to market conditions. Certain ETFs may not track underlying benchmarks as expected. ETFs are also subject to the following risks: (i) an ETF's shares may trade at a market price that is above or below its net asset value; (ii) the ETF may employ an investment strategy that utilizes high leverage ratios; or (iii) trading of an ETF's shares may be halted if the listing exchange's officials deem such action appropriate, the shares are de-listed from the exchange, or the activation of market-wide "circuit breakers" (which are tied to large decreases in stock prices) halts stock trading generally. The firm has no control over the risks taken by the underlying funds in which clients invest.

Mutual Funds When a client invests in open-end mutual funds or ETFs, the client indirectly bears its proportionate share of any fees and expenses payable directly by those funds. Therefore, the client will incur higher expenses, many of which may be duplicative. In addition, the client's overall portfolio may be affected by losses of an underlying fund and the level of risk arising from the investment practices of an underlying fund (such as the use of derivatives)

Risk of Loss: All investment programs have the risk of loss. Investing in securities involves risk of loss that clients should be prepared to bear. The firm does not and cannot guarantee any level of performance or your investment objectives will be met.

Item 9 – Disciplinary Information

The firm and its senior management have not reported any material legal or disciplinary events that would be material to a client's evaluation of the firm or the integrity of its management.

Item 10 – Other Financial Industry Activities and Affiliations

CROBO Advisors LLC is affiliated through common ownership with Getbit Technologies Inc., CROBO Money, and CROBO Earn.

CROBO Money operates as a remittance business and may market CROBO Advisors LLC services to existing customers through website banners, customer dashboards, and email

communications.

These affiliated relationships create potential conflicts of interest because affiliated businesses may benefit from introducing clients to CROBO Advisors LLC. The firm seeks to mitigate these conflicts through disclosure, supervisory procedures, and by ensuring clients are not required to utilize affiliated services in order to obtain advisory services.

Item 11 – Code of Ethics, Participation or Interest in Client Transactions and Personal Trading

As a fiduciary, CroboEarn and its associates have a duty of utmost good faith to act solely in the best interests of each client. Our clients entrust us with their funds and personal information which, in turn, places a high standard on our conduct and integrity. Our fiduciary duty is a core aspect of our Code of Ethics and represents the expected basis of all our dealings. CroboEarn undertakes to comply with the mandates and requirements of all applicable laws and regulations and strives to take act in an ethical and professionally responsible manner in all professional services and activities provided to clients.

Code of Ethics Description

This code does not attempt to identify all possible conflicts of interest and literal compliance with each of its specific provisions will not shield associated persons from liability for personal trading or other conduct that violates a fiduciary duty to advisory clients. A summary of the Code of Ethics' Principles is outlined below.

- Integrity - Associated persons shall offer and provide professional services with integrity
- Objectivity - Associated persons shall be objective in providing professional services to clients.
- Competence - Associated persons shall provide services to clients competently and maintain the necessary knowledge and skill to continue to do so in those areas in which they are engaged.
- Fairness - Associated persons shall perform professional services in a manner that is fair and reasonable to clients, principals, partners, and employers and shall disclose conflict(s) of interest in providing such services.
- Confidentiality - Associated persons shall not disclose confidential client information without the specific consent of the client unless in response to proper legal process, or as required by law.
- Professionalism - Associated persons' conduct in all matters shall reflect the credit of the profession.
- Diligence - Associated persons shall act diligently in providing professional services.

We periodically review and amend our Code of Ethics to ensure that it remains current, and we require all firm access persons to attest to their understanding of and adherence to the Code of Ethics at least annually. Our firm will provide a copy of its Code of Ethics to any client or prospective client upon request.

Investment Recommendations Involving a Material Financial Interest and Conflicts of Interest Neither our firm, its associates nor any related person is authorized to recommend to a client or effect a transaction for a client, involving any security in which our firm or a related

person has a material financial interest such as in the capacity as an underwriter, adviser to the issuer, etc.

Advisory Firm Purchase of Same Securities Recommended to Clients and Conflicts of Interest Our firm and its related persons may buy or sell securities similar to, or different from, those we recommend to clients for their accounts. To reduce or eliminate certain conflicts of interest involving the firm or personal trading, our policy may require that we restrict or prohibit associates' transactions in specific reportable securities transactions. Any exceptions or trading pre-clearance must be approved by the firm principal in advance of the transaction in an account, and we maintain the required personal securities transaction records per regulation.

Item 12 – Brokerage Practices

The firm currently anticipates utilizing Alpaca as its primary qualified custodian, but other custodians may be available for clients. In selecting broker-dealers and custodians, the firm considers factors including execution quality, platform functionality, operational efficiency, technology integration, transaction costs, financial stability, and client experience. The firm currently does not anticipate receiving soft-dollar benefits in exchange for directing client brokerage activity.

The firm may aggregate transactions where appropriate and consistent with its duty to seek best execution. The firm's algorithmic investment management platform is integrated with Alpaca APIs for onboarding, account management, and trade execution functionality.

The custodian provides the Firm with services that assist us in managing and administering clients' accounts which include software and other technology that (i) provide access to client account data (such as trade confirmations and account statements); (ii) facilitate trade execution and allocate aggregated trade orders for multiple client accounts; (iii) provide research, pricing and other market data; (iv) facilitate payment of fees from its clients' accounts; and (v) assist with certain back-office functions, recordkeeping and client reporting.

As part of the arrangement described above, the custodian also makes certain research and brokerage services available at no additional cost to our firm. These services include certain research and brokerage services, including research services obtained by the custodians directly from independent research companies, as selected by our Firm (within specific parameters). Research products and services provided by the custodians to our firm may include research reports on recommendations or other information about, particular companies or industries; economic surveys, data and analyses; financial publications; portfolio evaluation services; financial database software services; computerized news and pricing services; quotation equipment for use in running software used in investment decision-making; and other products or services that provide lawful and appropriate assistance by the custodians to our firm in the performance of our investment decision-making responsibilities. The aforementioned research and brokerage services are used by our firm to manage accounts. Without this arrangement, the Firm might be compelled to purchase the same or similar services at our own expense.

As a result of receiving the services discussed above, the Firm has an incentive to continue to use or expand the use of the custodians' services. The Firm examined this conflict of interest when we chose to enter into the relationship with the custodians and we have determined that the relationship is in the best interest of our firm's clients and satisfies our client obligations, including our duty to seek best execution.

The custodian charges brokerage commissions and transaction fees for effecting certain securities transactions (i.e., transaction fees are charged for certain no-load mutual funds, commissions are charged for individual equity and debt securities transactions)

The custodian generally does not charge clients separately for custody services but are compensated by account holders through commissions and other transaction-related or asset-based fees for securities trades that are executed through the custodians or that settle into accounts at the custodians. The custodian charges brokerage commissions and transaction fees for effecting certain securities transactions (i.e., transaction fees are charged for certain no-load mutual funds, commissions are charged for individual equity and debt securities transactions). The custodian enables us to obtain many no-load mutual funds without transaction charges and other no-load funds at nominal transaction charges. The custodians' commission rates are generally discounted from customary retail commission rates. However, the commission and transaction fees charged by the custodian may be higher or lower than those charged by other custodians and broker-dealers.

We may aggregate (combine) trades for ourselves or our associated persons with your trades, providing that the following conditions are met:

1. Our policy for the aggregation of transactions shall be fully disclosed separately to our existing clients (if any) and the broker-dealer(s) through which such transactions will be placed;
2. We will not aggregate transactions unless we believe that aggregation is consistent with our duty to seek the best execution (which includes the duty to seek best price) for you and is consistent with the terms of our investment advisory agreement with you for which trades are being aggregated.
3. No advisory client will be favored over any other client; each client that participates in an aggregated order will participate at the average share price for all our transactions in a given security on a given business day, with transaction costs based on each client's participation in the transaction;
4. We will prepare a procedure specifying how to allocate the order among those clients;
5. If the aggregated order is filled in its entirety, it will be allocated among clients in accordance with the allocation statement; if the order is partially filled, it will be allocated pro-rata based on the allocation statement;
6. Our books and records will separately reflect, for each client account, the orders of which aggregated, the securities held by, and bought for that account.
7. We will receive no additional compensation or remuneration of any kind as a result of the proposed aggregation; and,
8. Individual advice and treatment will be accorded to each advisory client.

As a matter of policy and practice, we do not utilize research, research-related products and other services obtained from broker-dealers, or third parties, on a soft dollar commission basis other than what is described above.

Factors Considered in Recommending Custodians

We consider several factors in recommending custodians to a client. Factors that we consider when recommending custodians may include financial strength, reputation, execution, pricing, reporting, research, and service. We will also take into consideration the availability of the products and services received or offered (detailed above) by the custodians.

Directed Brokerage Transactions

The Firm does not allow clients to direct brokerage to a specific broker-dealer. For an individual third-party manager's and/or Sub-Advisor's policy on directed brokerage transactions, you must refer to *Item 12 – Brokerage Practices* of that managers form ADV 2A brochure.

Special Considerations for ERISA Clients

A retirement or ERISA plan client may direct all or part of portfolio transactions for its account through a specific broker or dealer in order to obtain goods or services on behalf of the plan. Such direction is permitted provided that the goods and services provided are reasonable expenses of the plan incurred in the ordinary course of its business for which it otherwise would be obligated and empowered to pay. ERISA prohibits directed brokerage arrangements when the goods or services purchased are not for the exclusive benefit of the plan. Consequently, we will request that plan sponsors who directs plan brokerage provide us with a letter documenting that this arrangement will be for the exclusive benefit of the plan.

Trade Errors

We have implemented procedures designed to prevent trade errors; however, trade errors in client accounts cannot always be avoided. Consistent with our fiduciary duty, it is our policy to correct trade errors in a manner that is in the best interest of the client. In cases where the client causes the trade error, the client will be responsible for any loss resulting from the correction. Depending on the specific circumstances of the trade error, the client may not be able to receive any gains generated as a result of the error correction. In all situations where the client does not cause the trade error, the client will be made whole, and we will absorb any loss resulting from the trade error if the error was caused by the Firm. If the error is caused by the Custodian, the Custodian will be responsible for covering all trade error costs. If an investment gain results from the correcting trade, the gain will be donated to charity. The Firm will not benefit or profit from trade errors.

Item 13 – Review of Accounts

Client portfolios are reviewed by our automated system for performance, risk, and asset allocation on at least a quarterly basis.

As users provide modifications to their data, including their preferences, goals, personal information, income, expenses, etc. CroboEarn's system will automatically adjust the insights and recommendations it gives to those users. For connected accounts, the Firm will automatically track the changes in the value and fundamentals for public securities and will reflect these changes in its recommendations and insights.

Clients are responsible for executing CroboEarn recommendations via their connected brokerages, but the Firm will track the changes in their holdings and their transactions when it gets updated information from these connected brokerages. Clients are responsible for reviewing the information provided by brokerages to ensure that this information is up to date and accurate.

Item 14 – Client Referrals and Other Compensation

Crobo does not currently have but may in the future enter relationships with unaffiliated persons (individuals or entities) that refer clients to Crobo for a fee. All referring parties will sign an agreement with Crobo. The referring parties will not provide investment advisory or supervisory services to clients. The referring party will have to provide the potential client with a copy of Crobo's ADV, along with a copy of a disclosure statement describing the referral compensation arrangement. The fee charged to the client is not greater than it would have been without a referring party.

Conflicts of Interest

Promotional and referral arrangements present a potential conflict of interest, particularly when the person recommending an investment adviser receives an economic benefit, as the payment received could incentivize a referral. The Firm helps minimize this potential conflict by fully disclosing its referral practices and any compensation or benefit earned in this Brochure and only making recommendations believed to be in the client's best interests. Crobo has adopted and implemented compliance policies and procedures, and its Code to mitigate conflicts of interest. The Firm's Code is available for review free of charge to any client or prospective client upon request.

Item 15 - Custody

The Firm has limited custody of some of our clients' funds or securities when the clients authorize us to deduct our management fees directly from the client's account. A qualified custodian (generally a broker-dealer, bank, trust company, or other financial institution) holds clients' funds and securities. Clients will receive statements directly from their qualified custodian at least quarterly. The statements will reflect the client's funds and securities held with the qualified custodian as well as any transactions that occurred in the account, including the deduction of our fee. Clients should carefully review the account statements they receive from the qualified custodian. When clients receive statements from the Firm as well as from the qualified custodian, they should compare these two reports carefully. Clients who do not receive a statement from their qualified custodian at least quarterly should also notify us.

Third-Party Standing Letters of Authorization ("SLOA")

Our firm is deemed to have custody of clients' funds or securities when clients have standing authorizations with their custodian to move money from a client's account to a third-party ("SLOA") and, under that SLOA, it authorizes us to designate the amount or timing of transfers with the custodian. The SEC has set forth a set of standards intended to protect client assets in

such situations, which we follow. By working with the qualified custodian, the Firm has in place seven provisions set forth by the SEC to assist in mitigating risk. The below must be followed by clients with third-party SLOAs:

- The client provides instructions to the qualified custodian, in writing, that includes the client's signature, the third party's name, and either the third party's address or the third party's account number at a custodian to which the transfer should be directed.

- The client authorizes the Firm, in writing, either on the qualified custodian's form or separately, to direct transfers to the third party either on a specified schedule or from time to time.

- The client's qualified custodian performs appropriate verification of the instruction, such as a signature review or other method to verify the client's authorization and provides a transfer of funds notice to the client promptly after each transfer.

- The client can terminate or change the instruction to the client's qualified custodian.

- The Firm has no authority or ability to designate or change the identity of the third party, the address, or any other information about the third party contained in the client's instruction.

- The Firm maintains records showing that the third party is not a related party of Firm or located at the same address as the Firm.

- The client's qualified custodian sends the client, in writing, an initial notice confirming the instruction and an annual notice reconfirming the instruction.

As stated earlier in this section, account statements reflecting all activity on the account(s), are delivered directly from the qualified custodian to each client or the client's independent representative, at least quarterly. You should carefully review those statements and are urged to compare the statements against reports received from us. When you have questions about your account statements, you should contact us, your Advisor or the qualified custodian preparing the statement.

Item 16 – Investment Discretion

The Firm provides investment advice on both a non-discretionary and discretionary basis. If we are acting in a discretionary capacity, the Firm may place trades within a client account without pre-approval from the client.

Item 17 – Voting Client Securities (Proxy Voting)

We do not vote proxies on behalf of our clients. Clients will receive proxies and other solicitations directly from their custodian or the transfer agent. Clients retain the responsibility for receiving and voting proxies for all securities maintained in their accounts.

Item 18 – Financial Information

Registered Investment Advisers are required in this Item to provide certain financial information or disclosures about our financial condition. We have no financial commitment that impairs our ability to meet contractual and fiduciary commitments to clients, and we have not been the subject of bankruptcy proceedings. We do not have custody of client funds or securities or require or solicit prepayment of more than $1200 in fees per client six months or more in advance.
